How to Customize Logo/Colour Printing?

Printing Area

Why 1×20ft MOQ?

PLA cups are designed for cold or room-temperature beverages and are not heat resistant. During sea shipping, temperatures inside containers can become very high. If the cups are not well protected, they may soften, deform, or stick together.

To ensure product quality, our standard 20ft container shipments include: Each carton packed with an insulated liner bag **(included in price--see picture 1/2)**

The entire container covered with a large thermal blanket **(included in price--see picture 3/4)**

We can accept a trial order of 50,000 pcs per size for initial cooperation. However, if shipping as LCL (less than container load), additional costs will apply for:

1. Export cost handling fee
2. Palletizing and thermal cover wrapping for each pallet **(see picture 5)**
